PREFACE

The present volume of detailed State and county-level ~~estimates~~ ^{estimates} of WIC-eligible populations has been prepared by the Food and Nutrition Service (FNS) to accompany the "Report of the WIC Eligibility Study: Summary of Data, Methods, and Findings," completed in July 1987. It is expected that these detailed data sets will be of interest primarily to State and local WIC agency administrators and planners, researchers, and others interested in WIC program operations at State and local levels.

These estimates of WIC eligibility are limited to the baseline year of 1979, based on the comprehensive decennial U.S. Census data available for that year. More current estimates of the WIC-eligible population can be projected from the baseline estimates validly for the national level (50-State and District of Columbia total) based on the Census Bureau's Current Population Survey national sample information. Comparable valid estimates of current WIC eligibility cannot be made generally for States and counties, since consistent current income data are generally not available for those geographic levels.

The baseline estimates presented here are based closely on the detailed census counts of infants, children ages 1-to-5 years, and recently childbearing women in each area in households with annual incomes below 185 percent of the U.S. poverty line. Estimates are presented both for the income-eligible population in each area and for the "fully eligible" population consisting of those income-eligible persons who are estimated also to be at nutritional risk under representative WIC Program risk criteria.

Estimates of the WIC fully eligible population are divided into "higher-priority" eligibles -- those estimated to be at risk on medically based criteria (WIC Priority Levels I-III) -- and "lower-priority" eligibles -- those persons estimated to be at risk only under dietary risk criteria (Priority Levels IV-VI). For the county-level table (Part B of this volume) the estimated number of lower-priority eligibles equals the number of fully eligible persons minus the estimated higher-priority eligibles. Eligible postpartum women are divided between "higher-priority" and "lower-priority" on the same basis as other WIC categories, in terms of their estimated risk status (i.e., medically based or diet-only-based). This may not correspond to current WIC practice for postpartum women, however, who may be certified, at State option, in Priority Levels III through VI.

The State-level estimates (Part A of the present volume) also are detailed by age of women and children, by race and hispanic ethnic identity, and by three levels of income/poverty: below 100 percent, below 130 percent, and below 185 percent of the U.S. poverty line. Some States use income cutoffs for WIC eligibility that are lower than 185 percent of poverty. For these States, the baseline eligible populations under their actual limits can be estimated by interpolation from the detailed estimates provided.

States also differ in the specific criteria defined for determining nutritional risk. The WIC Eligibility Study, however, estimated the frequency of nutritional risk and resulting numbers of persons who would be found at risk (and hence fully eligible for WIC) on the basis of a common,

representative set of the criteria established by the 50 States and District of Columbia. This "modal set" of the independent nutritional risk definitions and criterion values specified by the WIC State Agencies in their 1984 Annual Plans of Operation was determined and used in the estimation, representing the most prevalent or predominant practice throughout the WIC program in defining nutritional risk.

The baseline estimates of fully eligible WIC populations provided in the present volume thus do not reflect the differences that exist among the States in the various nutritional-risk criteria for WIC eligibility, but rather the most widely shared elements. They provide a common baseline for assessing WIC eligibility levels in States on a consistent basis in all areas, and hence a common comparative measure of need for WIC services. This common measure of WIC eligibility also provides a baseline that individual States may use in approximating their actual WIC-eligible populations under their own particular risk criteria when these are preponderantly either more or less stringent than the prevailing modal practice throughout the program.

The State level estimates of eligible persons by detailed WIC categories presented here differs slightly from those presented in the original report, tables 16 and 17. The present figures are more accurate, due to re-estimation of the breastfeeding and postpartum non-breastfeeding categories with improved computational facilities, reducing rounding error. This recomputation was carried out for the national level estimates provided in the main report and carried out for all levels (State and county) for the present report.

A full description of the data and methods used in estimating WIC eligibility is provided in the "Report of the WIC Eligibility Study: Summary of Data, Methods, and Findings" (FNS, July 1987) and the companion Technical Appendixes. Limitations of the data and method also are discussed extensively. Since the study uses data, especially health and dietary survey data, not specifically designed to measure WIC program eligibility, its accuracy and reliability are limited to some extent. Nonetheless, these are the best estimates of WIC eligibility, on a consistent, comprehensive basis, that are available at this time.

LIST OF TABLES

PAGEPart A. Detailed Baseline Estimates of WIC-Eligible
Population Groups, by State

1 --	Estimated Number of Persons Eligible for the WIC Program, by Risk Priority, 1979 (including income-eligible and fully eligible population groups)	1
2 --	Estimated Number of Persons Fully Eligible for the WIC Program, by Income, 1979 (including children by age and income)	14
3 --	Estimated Number of Pregnant Women Fully Eligible for the WIC Program, by Age and Income, 1979	66
4 --	Estimated Number of Postpartum Women Fully Eligible for the WIC Program, by Age and Income, 1979) ...	118
5 --	Estimated Number of Breastfeeding Women Fully Eligible for the WIC Program, by Age and Income, 1979	170

Notes to Tables	221-a

FOOTNOTES

^a The estimated WIC eligible population in the baseline period is based on 1979 annual incomes from the 1980 U.S. Census of Population and Housing. These estimates correspond to the average monthly number of persons eligible during 1979, rather than to the (larger) number of persons eligible at any time during the year or the (smaller) number eligible throughout the year.

^b United States totals include the 50 States and District of Columbia. Outlying areas with WIC programs (Guam, Puerto Rico, and the U.S. Virgin Islands) are not included. Indian WIC State Agency eligible populations are included within the geographic-area estimates (county, State, and national).

^c All persons with household incomes below 185 percent of the U.S. poverty line (Census definition). In fiscal year 1987, 16 States set income limits for WIC eligibility lower than the maximum statutory limit for all or part of their WIC populations:

<u>State</u>	<u>Percent of U.S. Poverty Guideline (OMB definition)</u>	<u>Limit Varies with Local Health Care Guidelines</u>
Alabama	150	
Arizona		100/185
California		136/185
Colorado		100/185
Florida		100/185
Indiana		100/185
Iowa	150	
Louisiana	140	
Maine	172/185	
Missouri	175	
Ohio		100/185
South Dakota	150	
Tennessee	170	
Texas	150	
Virginia	167	
West Virginia	150	

^d The Bureau of the Census poverty-income definition was followed in developing the 1979 baseline estimates of the present study rather than the DHHS/OMB "Poverty Guideline" standard of poverty income. The Poverty Guideline, which is used in the WIC Program, lags the more detailed Census poverty-line measure by approximately 1 year; with inflation, it thus tends to be slightly lower in any given year than the Census poverty measure. Using the Census poverty definition thus tends to overstate slightly the number of persons eligible in any given time period under the DHHS/OMB Poverty Guideline. This source of overestimation in baseline number of persons income-eligible for WIC amounted to approximately 3 percent in 1979, averaged across WIC categories. Other limitations of the data and method tend to result in underestimation of the true eligible population. The various

limitations and potential estimation biases are discussed in "Report of the WIC Eligibility Study: Summary of Data, Methods, and Findings" (FNS, July 1987).

e The WIC "fully eligible" population is the estimated number of income-eligible persons times the estimated frequency of nutritional risk for each WIC target population group, under a consistent, representative set of the risk criteria currently specified for that group (1984) by the 50 State and District of Columbia WIC State agencies.

f "Higher-priority eligibles" are fully eligible persons under medically based nutritional-risk criteria (WIC Priority Levels I-III). "Lower-priority eligibles" are fully eligible persons under diet-based nutritional-risk criteria only (Priority Levels IV-VI). Continuing eligibility of WIC participants in some States under the "Avoidance of Regression" risk criterion (Priority Level VII) is omitted as not relevant in determining initial population eligibility levels.

g The population categories by race and Hispanic ethnic identity are non-overlapping and additive. "All Groups" includes a small number of "Other" persons not separately classified. The definitions are those described in OMB Directive 15, "Race and Ethnic Standards for Federal Statistics and Reporting" (FR 42, No. 87, May 4, 1978).

"Native American" includes (non Hispanic) American Indian and Alaskan Native peoples who maintain cultural identification through tribal affiliation or community recognition. "Asian or Pacific" includes persons having origins in any of the original peoples of the Far East, Southeast Asia, the Indian Subcontinent, or the Pacific Islands.
